COMPANY PROFILE

Ketai Industries Lighting Co., Ltd. was established in 1999 by Brother Daniel and David, focusing on develoment and production of top level commercial lighting products, and having developed thousands of interior and exterior lighting fixtures, including recessed fluorescent lights, track lights, multiple lights modular and etc., Since entering LED Lighting era, we new products, incluing LED downlights, LED track lights, LED spot lights, LED wall lighting and outdoor fixtures.

OUR OFFICE BUIDING

WECOME TO READ
AND ORDER

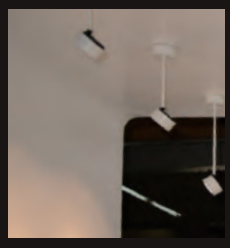
We are ISO9001 Certified manufacturer and most of our products are approved with CE, CB, GS, TUV and CCC certifications. The quality of our products is assured by our implementing QS, ERP system and Well-equipped testing lab. With more than 14 years experience in lighting fixture exporting field, our markets have covered the whole Europe, mid-southern America, Mid-East and China

KETAI has updated technology and experiences on developing & production of lighting fixtures, especially LED lighting products, by accumulating over ten years as a key LED lighting manufacturer in China.

Compared to traditional lighting, LED emits no UV or IR radiation, has a very low heat generation, a long lifetime as well as a very low power consumption but contains no mercury.

Environment
friendly

Our LED downlights and spotlights have very low energy consumption and long functional life, reducing energy demand and CO_2 production. The exceptional performance reduces the installed quantities of luminaires and over-all costs and saves energy.



Energy efficient

By using optical design software, our lighting fixtures can provide a specific light distribution for different applications in general and accent lighting, they can also provide full light level when switched on, a general disadvantage of LEDs is their high light intensity, but the user doesn't have to sacrifice its lighting comfort for energy efficiency: the intense glare source of the LED is well mechanically shielded and free of glare.

Comfortable
lighting

The excellent light distribution results in fewer luminaires and lower energy consumption.The thermal management of the luminaires has been technically optimized, which results in the prolonged life time of the LEDs and as can be instantaneously switched or dimmed, this also increases the working life and energy saving.

Painting

Dust-free

Assembly

Stamping

CNC

Die-casting

Manufacturing Base

Ketai has five workshops:
stamping workshop, die-casting workshop, painting workshop, assembly workshop and electronic workshop

Main machinery and equipment :

. 26 sets of 12-120T punching machine
. 8 sets of 168-400T zinc aluminum die-casting machine
. many lean assembly lines
. 2 imported powder painting lines
. A series of other CNC, spinning, drilling, grinding, polishing ,folding and welding equipments

^^ Laboratory Equipment

>> Orrosion resistance test

Laboratory
Equipment

- Integrating sphere
- Corrosion resistance tester
- High temperature resistant tester
- Impact energy tester
- Push-pull effort tester
- Torque tester
- Illumination tester
- Leakage current tester
- Insulation resistance tester
- Grounding resistance tester
- Electrical strength tester
- Infrared imager

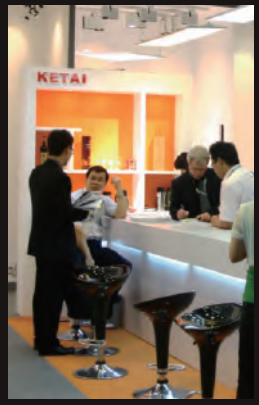
Teamwork

The R&D Department has 19 engineers and they independently research and develop more new products each year. Our engineers have the comprehensive ability of structure development, optical design, thermal design to meet customers' various demands.

The Export sales representatives are on the way for you.

Service for our business partners is a great priority with us and will also be intensified in the future.

The young and committed team is always endeavoured with our business partners to achieve the very best results for your projects.



Advanced optical technology

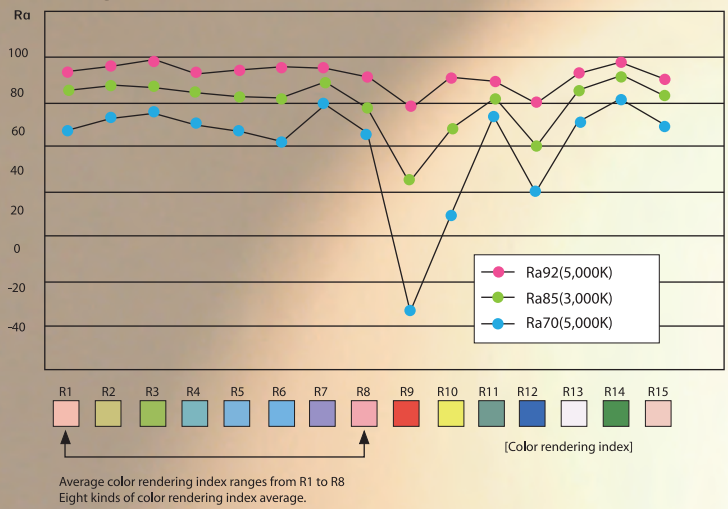
LED lights are developed by adopting world top class optical technology and process to guarantee outstanding optical quality. Consequently, LED has accurate light distribution , high light output, even and soft light while no dark dot, dark area or halo.

Even light with natural halo

Uneven light with dark dot and area

Uneven boundary with stray and virtual image

Average Ra evaluation index.



Average color rendering index ranges from R1 to R8
Eight kinds of color rendering index average.

Ra Evalution index is to estimate the color rendering index of the lighting product to see the reflection level of natural color compared to those by incandescent lamps. In standard range, we offer CRI 80+ product and CRI 95+ is available.

High CRI

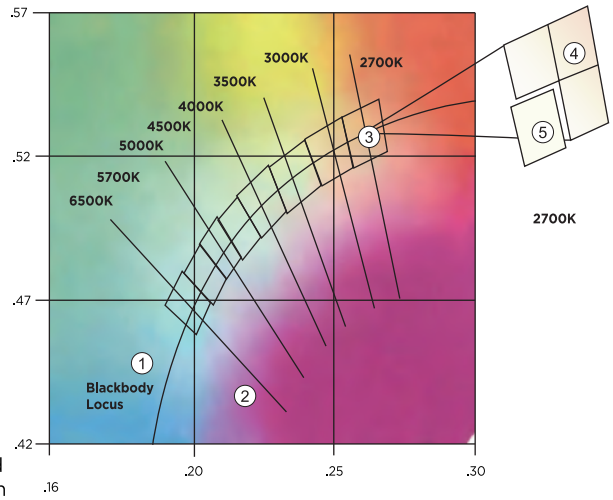
Fitting with LED generates the light even and soft, making the subject natural and clean, and consequently creating strong stereoscopic feeling, and displaying natural and attractive colors.

Designed to emphasize the freshness of food helps to highlight the appeal and presentation of various types of foodstuffs. We offer a range of color temperatures that complement the specific type of food being presented. Because our lights irradiate the food with much less of the heat and no UV radiation that tend to accelerate food spoilage, you can present the commodities with brighter light that provides higher color rendering characteristics.

CCT Consistency

The requirement for high color temperature consistency for the quality lighting faces difficulties in market. When you see different white among different LED lighting fixtures, you will know the problem. It is a headache for designers and consumers. For this purpose, more and more LED light source manufacturers are using standard procedures to solve this problem - all LEDs are sorted out, stored and processed in strict and scientific criterion to guarantee the LEDs in consistency in one batch.

When LEDs are manufactured, the most challenging part is producing consistent and precise white color. Binning is the process of sorting the white LEDs into groups of similar white colors. The regulation of this process is outlined by the ANSI standards for tolerances of while color variations to fit within a color temperature group, or bin. Some LED manufacturers have adapted a more strict process of sorting called micro-bin which allows for much smaller which color variation. Ketai applies LEDs that exceed the ANSI binning standards, giving our fittings optimal color matching.



Binning Explanation - When white LEDs are created, whether they be on the warm or cool end of the spectrum, there are always slight inconsistencies with regards to specific color temperatures.

A. The arced black line in the graph at right represents the white color spectrum.
B. These long intersecting lines represent the range, from one end of the line to the other. of variation in color for each corresponding color temperature,
C. In order to keep the range of each temperature as close to the same color as possible,ANSI created tolerance zones. Only the LEDs that fall into this range are used for that particular color temperature,these are referred to as “bins”.
D. As you can see this bin still has plainly visible variations throughout. ANSI tolerance zones are adjacent to account for the challenges aronnd manufacturing LED chips consistently.
E. Once divided into smaller bins, the differences in color are much less, allowing for minimal variation when two or more LEDs are used together.

Although there is a cost associated with consistency, various LED chip manufacturers now make smaller bins available. Micro-bin size varies between chip manufacturers and while micro-bins allow for better consistency by batch,there is commonly a color variation between batches.

Accurate light distribution and control

10° 15° 30°

Most of our product has different beam angles in range, like Diamond series have three kinds of beam angles, 10° & 15° & 30° , meeting the different lighting requirements.

Apollo

Recessed Downlight

Apollo Series are a newly developed recessed downlight. Provides with high brightness OSRAM,PHILIPS LED light source, power supply from constant current driver. you can select the optimal light for every application.

TECHNICAL DATA

Item No.:	MH204-G12	MH204-CDMR111	MH204-G8.5	MH204-AR111
Input:	230V AC 50Hz	230V AC 50Hz	230V AC 50Hz	12V AC 50Hz
Lampholder type:	G12	Gx8.5	G8.5	G53
Lamp Type :	HIT-CE Max 150W	HIR111 Max 70W	HIT-TC Max 70W	AR111 Max 100W
Cutout :	Ø162 mm			
IP rating:	IP20			
Main Material:	Aluminium			
Surface Finish:	White/Chrome/Satin Nickel/Gold/Antique brass/Bronze/Grey			
Adjustable direction:	Cimbal			
Installation Accessories:	Leaf Clip			
Wiring:	W/Connection box			
Optics:	Aluminium clear anodized Reflector + 3mm tempered center-frosted glass			

PACKING

Box size:	18 x 18 x 18.6 cm
Carton size:	37.5 x 37.5 x 40 cm
Pieces per carton:	8 pcs
Each carton :	0.056 m^3
